Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

Persona 1: Credit Risk Analyst (Model Operator)

SAYS Says that the system must process applications in real-time and emphasizes that minimizing false negatives is critical because approving bad debtors costs the bank the most money.		THINKS Thinks about whether the machine learning model will successfully reduce bank defaults and if the automated rejections can be easily justified during regulatory compliance audits.
	<i>Model Operator</i>	
DOES Manually reviews borderline approval cases flagged by the system and monitors monthly evaluation metrics like Recall and ROC-AUC curves.		FEELS Feels anxious about high-risk applicants slipping through automated cracks but feels hopeful that Explainable AI (SHAP/LIME) will make the model easy to trust.

Persona 2: Credit Card Applicant (Coustomer)

SAYS Says that their history of paying utility bills on time should count for something and demands a clear, transparent explanation if their application gets denied.	THINKS Thinks about whether a low credit score will cause an instant rejection despite their steady income and wonders if their sensitive financial data is secure.
	Coustomer
DOES Uploads necessary income certificates and identity documents online and actively logs into the web app to check their application status	FEELS Feels highly stressed that a rejection will further damage their credit score but feels relieved when a dashboard gives them a quick, clear status update.
