

Communication

Date	4 July 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Communication Plan:

Clear and collaborative documentation channels served as the operational backbone for our Credit Card Approval Prediction Framework project. By establishing explicit feedback loops—ranging from daily asynchronous check-ins for script debugging to formal bi-weekly milestones with academic coordinators—our communication framework ensured complete alignment between user-interface components and core machine learning logic. This disciplined documentation tracking allowed the team to quickly resolve complex feature encoding discrepancies and maintain absolute transparency across all phases of the system's initialization.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	WhatsApp / Discord	B.Jayasri	Track daily progress on ML model components and frontend UI integration tasks.
2	Progress Update	Weekly	Google Meet / GitHub	B.Tejeswamy Reddy	Review baseline model evaluation metrics (Accuracy, ROC-AUC) and code structure updates.
3	Issue / Bug Discussion	As Needed	GitHub Issues / Slack	B.Tejeswamy Reddy	Debug data preprocessing issues, Flask routing exceptions, or categorical encoding bugs.
4	Stakeholder Review	Bi-Weekly	Google Meet	B.Tejeswamy Reddy	Demonstrate working features of the automated credit assessment application for feedback.
5	Final Demo Rehearsal	Once	Microsoft Teams	B.Jayasri	Run a full end-to-end simulation of the predictive pipeline ahead of the final presentation evaluation.
6	Retrospective Review	Monthly	Notion / Docs	B.Jayasri	Review operational bottlenecks, documentation completeness, and optimize task management.

Communication Challenges & Resolutions:

S.No	Challenge Faced	Resolution / Action Taken
1	Misalignment on data feature configurations between frontend expectations and backend ML arrays.	Standardized a shared API contract mapping input formats explicitly using Flask JSON payloads.

2	Delays in resolving model performance bugs due to asynchronous communication.	Set up a central discord channel with webhook notifications to flag codebase breaks immediately.
3	Tracking merge conflicts across separate dataset cleaning scripts in source control.	Enforced clear pull request reviews and held brief code syncing sessions before merging major updates.
